EDUCATION

University of Florida

Aug 2025 – May 2027

Master of Science, Computer Science CGPA: 4.0/4.0

Gainesville, FL, USA

Courses: Advanced Data Structures, Trust-worthy Machine Learning, Analysis of algorithms, Distributed Operating Systems

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Python, Java, SQL, C, C++, PHP, HTML/CSS

Frameworks & APIs: React.js, Redux, Angular.js, Spring Boot, FastAPI, REST APIs

Cloud & Databases: AWS (EC2, S3, Lambda), PostgreSQL, MySQL, SQLite, Apache Kafka, GraphQL, Docker, CI/CD

ML & GenAI: LLMs, LangChain, RAG, PyTorch, Scikit-learn, Pandas, NumPy, MCP, AI Agents

Tools: Git, GitHub, version control, Jenkins, Maven, IntelliJ IDEA, Postman, Splunk, Grafana, Jira, Agile, Figma

WORK EXPERIENCE

Graduate Student Assistant - InterviewBuddy | University of Florida

Mar 2026 – Present

- Architected and developed a **full-stack** web application using **React**, **JavaScript**, **Python** (FastAPI), HTML, and CSS, implementing JWT-based authentication and responsive user interfaces.
- Integrated **LLaMA 3** into a ML-powered RAG pipeline for real-time interview generation, context-aware candidate scoring.
- Designed an async FastAPI backend with SQLite for state management; ChromaDB for semantic vector-based resume parsing.

Graduate Research Assistant | TEA Lab, University of Florida

Jan 2026 – May 2026

- Built a **transformer-based multimodal architecture** integrating RGB and LiDAR data using CNN encoders for action-conditioned future scene prediction.
- Trained multimodal models on the **nuScenes dataset**, enabling real-world learning at production-scale data volumes.
- Designed **voxelization pipelines** & 3D occupancy grids processing 32K+ LiDAR points/frame using **PyTorch** and **Open3D**.
- Trained distributed models on the **HiPerGator HPC cluster** with mixed-precision, reducing GPU memory usage by **~50%**.

Software Development Engineer | JPMorgan Chase & Co.

Aug 2023 – Aug 2025

- Built scalable **Java** and **Spring Boot** microservices to modernize a **30-year-old financial platform**, supporting 25M+ monthly interactions and improving system scalability and maintainability.
- Improved platform reliability by leading a Java and Spring Boot upgrade, resolving critical memory bottlenecks and **reducing production outages by 50%** while **increasing system stability by 40%**.
- Built observability and monitoring solutions using **Splunk** and **Grafana**, enabling proactive detection of performance issues and improving operational visibility across production systems.
- Delivered new payment capabilities for **JPMC Wallet (Paze)** by integrating **REST APIs** and optimizing **React** applications, improving **API responsiveness by 40%** for 66M+ users.
- Collaborated **cross-functionally** across **engineering**, **product**, and **QA teams** to launch customer-facing financial features while ensuring scalability, reliability, and regulatory compliance.
- Automated** development and code-review workflows using **GitHub Copilot** and **LLM-based tooling**, reducing review effort by **30%** and accelerating engineering productivity.
- Competed as a **Global Finalist (Top 8 Worldwide)** in AWS DeepRacer 2024 at AWS re:Invent, Las Vegas.
- Earned **AWS Developer Associate** and **AWS Cloud Practitioner** Certifications.

Software Development Intern | JPMorgan Chase & Co., India

Aug 2022 – Oct 2022

- Developed an end-to-end **full-stack** data upload feature using **React.js** and **Spring Boot** REST APIs for the **Chase Dealer Application**; implemented unit and integration testing for reliability.
- Built distributed systems using **Apache Kafka** for asynchronous data processing and reliable event-driven architecture.

PROJECTS

Neighborhood Community Platform | Angular, TypeScript, Go, PostgreSQL, GraphQL

[Github](#)

- Built a full-stack platform using **Angular (TypeScript)** and **Go**, developing scalable backend services and real-time user-facing workflows through high-performance REST APIs.
- Designed PostgreSQL data models and implemented **GraphQL** APIs to enable **efficient data retrieval**, authentication, role-based access control, and scalable access patterns for real-time application workflows.

Reddit Clone: Distributed REST API System | Gleam, Erlang/OTP, ETS, Linux

[Github](#)

- Architected a **concurrent distributed** backend using Gleam/Erlang (OTP) processes and ETS storage, implementing authentication, post creation, voting, feed retrieval with efficient inter-process communication & state management.
- Built **multi-client simulation workflows** to stress-test system concurrency, integrating **performance metrics** to measure throughput, latency, and bottlenecks, ensuring reliability through end-to-end functional validation and edge-case handling.
